SUMMARY

Results-driven Full-Stack Developer with proven experience delivering responsive web applications, backend systems, and machine learning integrations. Skilled in managing end-to-end development using React, TypeScript, Django, and modern DevOps tools like Docker and GitHub Actions. Certified in Cybersecurity (Google), UX/UI, and CCNA. Seeking a software engineering role to build scalable, impact-driven solutions.

SKILLS

Frontend

Typescript, Javascript, ReactJS, TailwindCSS, HTML, CSS, Svelte

Backend

Python, Django, Java

Databases

MySQL, SQLite, MariaDB

AI/ML

PyTorch

DevOps/Tools

Git, GitHub, Linux, Docker, GitHub Actions

EXPERIENCE

Self-employed

Polomolok, South Cotabato, Philippines

Freelance

Jan 2026 - Present

- Built and deployed responsive client websites using React, TypeScript, and TailwindCSS, handling the full lifecycle from requirements to deployment.
- Maintained and extended an existing POS codebase, implementing feature requests and bug fixes.
- Managed client communication end-to-end, including requirements gathering, timeline estimates, progress updates, and demo presentations to ensure alignment and timely delivery.

AgriDom

Davao City, Davao Region, Philippines

Backend Developer Intern

Jan 2025 - Mar 2025

- Designed and deployed Django back end for a DTR system, handling **50+ time entries per day** with zero data loss.
- Developed RESTful APIs for core functions, reducing manual reporting time by **~2 hours/week** for end users.
- Collaborated using Git and weekly sprints, maintaining a **90%+ feature completion rate** across 12 sprints.

PROJECTS

Portfolio Website

2026

- Built and deployed a responsive personal web portfolio to showcase software engineering skills, experiences, and projects.
- Implemented CI/CD pipelines utilizing GitHub Actions and Docker for streamlined deployments.

Crime Hotspot Prediction with Graph Attention Network and K-Means Clustering for Resource Allocation

2024

- Achieved **0.032 RMSE** and **0.023 MAE** in predicting crime hotspots on a normalized 0–1 scale, outperforming baseline K-Means alone by **~40%**.
- Developed the user interface with Django HTML templates, Tailwind CSS, and JavaScript, enabling interactive hotspot visualization and filter controls.

https://github.com/v-adrian/THESIS-24-CS-003

Sentinel

2023

- Built a criminal face recognition prototype for Davao City checkpoints with **~95% accuracy** in matching faces against a watchlist of **10+ persons of interest**.

- Assisted in UI development, back end logic, and debugging using Django, Python, and JavaScript, enabling <3 second face capture to result time.

<https://github.com/Sentinel-Eyes/Sentinel>

SmartSignal

2023

- Built a smart bicycle helmet with turn signals and motion activated brake lights, tested across 2+ riding hours with 100% reliable light activation.
- Programmed Arduino logic in C and soldered all components, achieving brake light response under 100ms and LED visibility from 50 meters.
